	Functional Requirements
	The user must be able to create his own account with a first name, last name and avatar in order to be able to save movies, personalizations and save settings
	On the main page, the user should see, in addition to the title of the movie, the cover of the movie, so that the movies visually differ
	On the main page, the user should see movies by category - so that the user can more easily find the category of the movie the customer needs. For example: Comedy, Action
	Each movie should have a save icon so that the user can save the movie for later viewing.
	Every movie should have Thriller so that the user can have a brief look at the plot of the movie
	The main page should have filtering by Reviews, Comments, Date, Views - to make it easier to find a movie
	The header of the site should have functional buttons: Home, Movies, Series, Saved movies
	There should be a functional search icon in the header of the website so that the user can find a movie by name.
	The website's media player should have buttons: Pause/Continue, rewind 15 seconds, volume, progress bar, to control the media player/watch a movie on the website
Netflix	Each movie must have information about the name of the movie, reviews, description of the movie, category, and author's composition - for complete information about each film and compliance with copyright
